You already have the part about adding the image right. Note that I create parameters for the position of the image as well as its dimensions:

```
float x = 10;
float y = 650;
float w = img.getScaledWidth();
float h = img.getScaledHeight();
```

I use these values to create a Rectangle object:

```
Rectangle linkLocation = new Rectangle(x, y, x + w, y + h);
```

This is the location for the link annotation we are creating with the PdfAnnotation class. You need to add this annotation separately using the addAnnotation() method.

You can take a look at the result here: <u>link_image.pdf</u> If you click on the **i** icon, you jump to the last page of the document.
